

# String Bio Private Limited

**Dr. Ezhil Subbian**

‘ONGC’s investment in String was instrumental in building a deep-tech solution with significant climate benefits for India and the World’

**Vinod Kumar**

‘With ONGC’s support, we have enabled a unique platform that can position India in a leadership role globally to enable sustainable solutions in diverse industries including Food, Feed and Agriculture’

## Company Profile

String Bio is an advanced biomanufacturing company developing sustainable ingredients for diverse sectors like agriculture, human nutrition and animal nutrition. We've developed a gas fermentation technology that utilizes methane (from natural gas or biogas) as raw material and converts it into value-added products. Our processes and technology are proven by a multi-purpose plant in India operational for the last five years.

The String platform addresses pressing global challenges, offering a sustainable solution to the issue of greenhouse gas emissions in the Agriculture and Food supply chain. By using methane as a raw material, String Bio contributes to mitigating environmental impact while meeting market demands for clean, traceable and sustainable products.

String Bio has been recognized by multiple National and International awards including the Top Innovator by Economic Times 2023 and Earthcare Award by Times of India in 2024.
